REJUVEN8 LASER

Rejuven8 provides a wide range of laser treatments performed by experienced Doctors using the market leading Fotona Laser. This highly advanced laser is non-ablative so patients leave their treatments with minimal indication a procedure has been undertaken.

The rejuvenating treatments with this laser stimulate the production of new collagen, which takes the body 5-8 weeks for you to see the maximum benefits. For collagen stimulation treatments, 3 sessions are generally recommended for optimum results although improvements are visible after the first treatment.

Skin Rejuvenation: stimulates new collagen growth reducing wrinkles and tightening skin.

Skin Repair: addresses further skin complaints like scarring, uneven colour.

Body Sculpting: works to tighten skin in areas that have relaxed, improving the appearance of 'bingo wings' or 'love handles'.

Vaginal Rejuvenation: is a new revolutionary treatment for women. Vaginal laxity may develop following childbirth or with age causing discomfort or reduced sexual satisfaction. Laser treatment stimulates the collagen and improves laxity with great results.

Other treatments include: Hair removal with less sessions required than other lasers.

Thread vein removal: often one treatment with the laser the veins disappear.
